PROJECT

Asset Borrowing App

The Asset Borrowing App is a team project that I've been working on with my team. Developed using React Native in Expo, the app's backend is running on Node.js, while MongoDB serves as the primary database. This application is designed to organizations or communities manage borrowed items.

Predict Letter

The Handwritten Thai Letter Prediction project is project that predict handwritten Thai letters in the range of α to $\varnothing$ using k-Nearest Neighbors (k-NN) and Decision Trees (DT) algorithms , developed in Python. The goal is to see how well these two ways of guessing work and figure out which one is better for recognizing handwritten Thai letters.
